RE: SHELL CANADA PROPOSED 5GHZ CELL TOWER INSTALLATION @11-25-78-20(PID014639742)

We acknowledge receipt of letter dated June 16-2023 informing us of Shell Canada's intent to install a 5GHZ Microwave Tower on 11-25-78-20(PID014639742) within a half mile of our home. Your letter also states that "Shell Canada is proposing to install communication tower(s) at various Shell wellsites within the Peace River Regional District (PRRD)." As we have Property next to other Shell sites, are those also proposed for 5GHZ Microwave Towers? We have not received notification or map of this.

As we have heard "Safe & Effective" many times over the last three years from our Government Groups, please define what the following means. "Health Canada's Safety Code 6, as may be amended from time to time, for the protection of the general public, including any combined effects of nearby installations within the local radio environment."

We believe that the Installation of a 5GHZ Tower will harm our Personal Safety, as well as harm and disrupt our Agricultural Business/ Farm Animals' Health. This seems an unnecessary Health Risk, as you have been running this site for many years already, without the proposed Tower. We also understand that Fiber Optic Cable Communication is much safer for everyone and already runs right next to this Proposed 5GHZ Site, making this Installation unnecessary and potentially dangerous to our whole Community. Our Health should not be sacrificed.

Before any 5GHZ Tower Installation is initiated, we are requesting Positive Health Safety Proof (Data, Documented Studies) when in Constant Personal Contact, with Microwave/Electromagnetic Radiation, that we will be subjected to with the projected 5GHZ Shell Canada Tower, in our Residential Area.

We look forward to your response (Data, Documented Studies) which prove we won't be harmed with the addition of this Technology, as well as answers to our other questions, by July 31, 2023.
